Appln. No.: 10/072,567

Amendment Dated: June 20, 2005 Reply to Office Action of April 21, 2005

Pls, enter the Exquirer Andt & the Andt after BSI-480US Fral. Veryone

1. Cancelled.

(Currently Amended) The stent of claim 1, A braided modular stent 2. comprising a first component and a second component, each component comprising an hourglass-shaped interface, each hourglass shaped interface comprising a reduced diameter section positioned between two sloped sections, each sloped section extending between the reduced diameter section and one of a plurality of nominal diameter sections, the reduced diameter section having a greater radial strength than the nominal diameter sections, wherein reduced diameter section of the hourglass-shaped interface has a greater braiding angle than the nominal diameter sections.

- 3. (Currently Amended) The stent of claim 1, A braided modular stent comprising a first component and a second component, each component comprising an hourglass-shaped interface, each hourglass shaped interface comprising a reduced diameter section positioned between two sloped sections, each sloped section extending between the reduced diameter section and one of a plurality of nominal diameter sections, the reduced diameter section having a greater radial strength than the nominal diameter sections, wherein the reduced diameter section of the hourglass-shaped interface comprises filaments having a first set of metallurgical properties different than a second set of metallurgical properties in the nominal diameter sections.
- (Currently Amended) The stent of claim 1, A braided modular stent 4. comprising a first component and a second component, each component comprising an hourglass-shaped interface, each hourglass shaped interface comprising a reduced diameter section positioned between two sloped sections, each sloped section extending between the reduced diameter section and one of a plurality of nominal diameter sections, the reduced diameter section having a greater radial strength than the nominal diameter sections, wherein the reduced diameter section of the hourglass-shaped interface comprises a plurality of first regions of braided filaments in which the filaments have a first cross-sectional area that is greater a second cross-sectional area in a plurality of second regions of braided filaments in the nominal diameter sections.
- (Currently Amended) The stent of claim 1 claim 24, wherein the first component comprises a body having at least one integral leg stump depending therefrom, each
